

MCARTHUR ISLAND SPORT AND EVENT CENTRE

EFFICIENCY IN ACTION

Variable Frequency Drives
Adjust pump motor speeds to match real-time demand, reducing energy consumption and costs.

Recommissioning
Fine tuning the building's sophisticated HVAC and ice plant systems to ensure optimal efficiency and performance.

Reflective Roof
A white roof reflects sunlight and deflects heat, keeping interiors cool.

LED Lighting Upgrades
Energy-saving LEDs replaced traditional bulbs throughout, including the sport lighting.

Refrigeration System
Upgraded to enhance efficiency, reliability, and performance.

Heat Recovery System
Ice plant's waste heat is captured and used to pre-heat domestic hot water, indoor air, and ice melt pit.
